

Injection therapy update course

Accredited by the RCGP

First Contact Physiotherapist have become central providers within our PCNs. It became clear however that a number of these had not had the opportunity to develop extended accredited skills in joint injection. We have produced an RCGP accredited course that will afford this opportunity to support individual development not just for physiotherapists but for any clinician.

The course enables clinicians to deliver more efficient and effective patient care, which is in line with current NHS policy to develop first contact practitioner provision and advanced practice roles across the NHS. The advanced clinical skills taught on this course will enhance the student's ability to support these developments.

Course content includes:

- Rationale for musculoskeletal injection therapy
- Clinical reasoning and diagnostics
- Pharmacology; pharmacokinetics and pharmacodynamics of relevant medicines
- Prescribing and administration of medicines; legal and ethical implications
- Communication and consent issues for injection therapy treatment

The course will run over 2 weekends. The cost of the course is £750 inc. VAT per participant, early bookings will receive a 20% discount (£600 inc. VAT) if you have a confirmed booking before 14 May 2021.

	Weekend 1	Weekend 2
Summer 21	12/13 June	17/18 July
Autumn 21	4/5 September	30/31 Oct
